

Indian Register of Shipping

Report of MARPOL 73/78, Annex VI Survey "Regulations for the Prevention of Air Pollution from Ships"

Type of Survey: Initial Survey/Annual Survey/Intermediate Survey/Periodical Survey/ Renewal Survey/Change of Flag Survey/General Examination*

Name of Ship: .	

I. R. No.:		
------------	--	--

IMO No.:

Port of Survey:

NO	TES:
1	Use "Y" for Yes/Satisfactory, "N" for Not Satisfactory, "NO" for No, "NA" for Not Applicable, "P" for Remains outstanding.
2	Where any repairs or any deficiencies pending comments to be included in the remarks section.
3	Appropriate details of the approval (Certificate No, Date, issuing Authority) are to be filled in remarks column at the time of
	initial Survey, Change of Flag, installation of equipment or Change of Certification as relevant, alternatively page of
	document reflecting the approval details is to be uploaded as supporting document.

Sr. No.	Item	Y/N/NO/ NA/P
A. G	eneral	
1	Have any changes been made or new equipment been installed which would affect the validity of the International Air Pollution Prevention Certificate or International Energy Efficiency Certificate?	
2	All instructions and/or notices including Operating Manuals are posted in the appropriate language as required and to the Master's satisfaction.	
3	Checking the validity of all Statutory Certificates and the Class Certificate.	
4	Checking that the Ship's complement complies with the Minimum Safe Manning Document.	
5	Checking that the Master, officers and ratings are certificated as required by the STCW Convention.	
6	The Ship is provided with Ship Energy Efficiency Management Plan (SEEMP) in compliance with Regulation 26.	
7	 Checking that EEXI Technical File as indicated in IEE Certificate is available onboard. (Note: Verification required at the first annual, intermediate or renewal IAPP survey on or after 1st January 2023. Applicable ship types as defined in MARPOL Annex VI regulation 2.2 - Bulk Carrier, Tanker, Combination Carrier, Containership, Cruise Passenger Ship, Gas Carrier, General Cargo Ship, LNG Carrier, Refrigerated Cargo carrier, Ro-Ro Cargo Ship, Ro-Ro Cargo Ship (Vehicle Carrier), Ro-Ro Passenger Ship) 	
8	Checking that Onboard Management manual (OMM) for SHAPOLI/EPL if applicable is available onboard. (Note: Verification required at the first annual, intermediate or renewal IAPP survey on or after 1 st January 2023)	
9	For ships of 5,000 gross tonnage and above	
9.1	The ship is provided with Ship Energy Efficiency Management Plan (SEEMP) Part II and Confirmation of Compliance.	•••
9.2	Confirmation that Fuel oil consumption data is being collected based on methodology stated in the SEEMP Part II.	•••
9.3	Confirmation that Statement of Compliance based on verification of Fuel oil consumption data required by Regulation 27 of MARPOL Annex VI for the previous calendar year is available.	
9.4	Confirmation that ship is provided with Ship Energy Efficiency Management Plan (SEEMP) Part III and Confirmation of Compliance. (Note: Applicable ship types as defined in MARPOL Annex VI regulation 2.2- Bulk Carrier, Tanker, Combination Carrier, Containership, Cruise Passenger Ship, Gas Carrier, General Cargo Ship, LNG Carrier, Refrigerated Cargo carrier, Ro-Ro Cargo Ship, Ro-Ro Cargo Ship (Vehicle Carrier), Ro-Ro Passenger Ship)	

B. Oz	one-Depleting Substances	
1	Does the ship have Ozone Depleting Substances on board? (e.g. Fire Fighting Installation, Air Conditioning/Refrigeration Installations containing followings but not limited to:	
	 Fire extinguishing agents: Halon 1211, Halon 1301, Halon 2402 (also known as Halon 114 B2); 	
	• Refrigerating gases: CFC-R11, CFC-R12, CFC-R113, CFC-R114, CFC-R115, HCFC-R22)	
2 a	For existing ships, plans, manuals and documents indicating the location on board and the details of systems equipment, including portable fire extinguishers, insulation or other material containing ozone depleting substances (Ozone Depleting Substances Record Book), if any, have been examined and identified in Record of Construction and Equipment (Form No.	
2 b	Annex VI Record) correctly (Reg. 12). In case Electronic Record Book (ERB) is provided for recording ozone depleting substances. Confirming that ERB is approved and "Declaration of MARPOL Electronic Record Book" is	
3	available onboard. Provide details: Are there procedures to prevent and/or mitigate deliberate emission of ODS including emissions occurring in the course of maintenance, servicing, repairing or disposing of systems	
4	or equipments. Are there procedures to indicate that ODS, when removed from ship are to be delivered to	
_	appropriate reception facility.	
5	Confirmation that no new installation or equipment, which contain ODS other than HCFCs, have been fitted on ships constructed after 19 May 2005 (reg. 12.3.1 of Annex VI). (Installations which contain HCFCs may be fitted on ships constructed before 1 January 2020) (reg. 12.3.2 of Annex VI).	
6	Results of external examination of installation or equipment containing ODS indicate satisfactory maintenance to ensure that there are no emission of ozone-depleting substances.	
7	Result of examination of record of periodic leak tests and consumption of ODS indicates leak free operation. (Deliberate emissions do not include minimal releases associated with the recapture or recycling of ODS).	
C. Re	gulation 13 - Nitrogen Oxides	
1	Does Regulation 13 apply to any diesel engine on the ship? (if no, this section of the checklist may be skipped.)	
2	Confirm that there are Engine International Air Pollution Prevention (EIAPP) Certificates for each marine diesel engine, required to be certified, as described in Regulation 13 of MARPOL	
3	73/78, Annex VI (Chapter 2.1 of the NOx Technical Code). Confirm that there is on board an approved technical file for each marine diesel engine rec certified.	quired to be
4 a	Confirm that there is a record book of engine parameters for each marine diesel engine required to be certified in the case where the engine parameter check method is used as a mean of onboard NOx verification (NOx Technical Code paragraph 6.2.2).	
4 b	In case Electronic Record Book (ERB) is provided for recording of engine parameters. Confirming that ERB is approved and "Declaration of MARPOL Electronic Record Book" is available onboard.	
5	If engine parameter check method is used:	
5.1 5.1.1	<i>Review of Documentation</i> Result of review of engine documentation contained in the technical file and the record book	
5.1.1	of engine parameters to check, as far as practicable, engine rating, duty and limitation/restrictions as given in the technical file have been maintained. (Note: Check that the followings have been included in the Technical File:	
	 Identification of Nox emission influencing engine components; Identification of Nox emission related adjustable engine settings) 	
5.1.2	Confirmation from the Engine record book that the engine has not undergone any component / part replacement, modifications or adjustments outside the options and ranges permitted in the	
	technical file since the last survey (Engine record books must contain details in chronological order of all changes/adjustments made relative to engines' components, settings or operating values, part replacement, part modification).	
5.2	Actual inspection of NOx influencing engine components	I
5.2.1	Confirmation that each NOx influencing component carries the required component identification number cross-referenced in the Engine Technical File.	

5.3	Verification of NOx influencing engine adjustable features	
5.3.1	Confirmation that engine adjustable features are within the limits specified in the engine	•••
	technical file (e.g. fuel cam position, injection valve opening, compression ratio etc.)	
	(Note the following extracts from NOx Technical Code	
	2.3.10 The Administration may, at its own discretion, abbreviate or reduce all parts of the	
	survey on board, in accordance with this Code, to an engine which has been issued an EIAPP	
	Certificate. However, the entire survey on board must be completed for at least one cylinder	
	and/or one engine in an Engine Family or Engine Group, if applicable, and the abbreviation	
	may be made only if all the other cylinders and/or engines are expected to perform in the	
	same manner as the surveyed engine and/or cylinder. As an alternative to the examination of	
	fitted components, the Administration may conduct that part of the survey on spare parts carried on board provided they are representative of the components fitted.	
	6.2.3.2 The surveyor shall have the option of checking one or all of the identified	
	components, settings or operating values to ensure that the engine with no, or minor,	
	adjustments or modifications complies with the applicable NOx emission limit and that only	
	components of the approved specification, as given by 2.4.1.7 of Nox technical code, are	
	being used. Where adjustments and/or modifications in a specification are referenced in the	
	Technical File, they must fall within the range recommended by the applicant for engine	
	certification and approved by the Administration.)	
6	If the simplified method is used:	
6.1	Review of engine documentation contained in the approved technical file.	
6.2	Has the test procedure been approved by the Administration or its R.O.?	
6.3	Confirmation that the analyzers, engine performance sensors, ambient condition	
0.0	measurement equipment, span check gases and other test equipment are of the correct type	
	and have been calibrated in accordance with the NOx Technical Code.	
6.4	Confirmation that the correct test cycle, as defined in the engine's technical file, is used for	
	this on- board confirmation test measurements.	
6.5	Ensuring that a fuel sample is taken during the test and submitted for analysis.	
6.6	Witnessing the test and confirmation that a copy of the test report has been submitted for	
	approval on completion of the test.	
7	If the direct measurement and monitoring method is used:	
7.1	Review of technical file of engine to verify that the direct measurement and monitoring	
	method is approved by the Administration.	
7.2	Documentation / Approval of the installed measuring equipment.	•••
7.3	Confirmation that the procedures to be checked in the direct measurement and monitoring	
	method and the data obtained as given in the approved onboard monitoring manual has been	
	followed.	
7.4	Verification of logged measurement results in order to ensure that the engine comply with	
	the NOx Technical Code and Reg. 13.	
7.5 a	Confirmation that record with reference to - 'The tier and on/off status of marine diesel	•••
	engines installed on board a ship to which Nox Tier III emission limit applies, which are	
	certified to both Tier II and Tier III or which are certified to Tier II' are maintained in	
	logbook as prescribed by the Administration at entry into and exit from an ECA, or when	
7.51	on/off status changes within an ECA together with the date, time and position of the ship.	
7.5 b	In case Electronic Record Book (ERB) is provided for recording of the tier and on/off status	•••
	of marine diesel engines. Confirming that ERB is approved and "Declaration of MARPOL	
8	Electronic Record Book" is available onboard.	amont of an
8	For marine diesel engine of an output more than 5,000 kW and a per cylinder displac	
	above 90 litres/ cylinder installed on ship constructed between 1 January 1990 and 3 1999	I December
8.1		
8.1.1 8.1.1	Does approved method exist?	
8.1.1	If yes, Is the approved method not commercially available: or	
8.1.1.1	Is the approved method not commercially available; or If commercially available, has the approved method been installed and that approved method	
0.1.1.2	file is on board	
812		
8.1.2	Verifications have been done in accordance with the procedures given in the approved	
	method file	
01	OR Chapting that the ansine has been contified confirming that it expenses within the limits set	
8.2	Checking that the engine has been certified, confirming that it operates within the limits set forth for Tier I. Tier II or Tier III.	
	forth for Tier I, Tier II or Tier III.	

9	Additional verification for ships fitted with Selective Catalytic Reduction (SCR) devic NOx	e to reduc
9.1	Verification that SCR including chamber, storage tank for SCR and associated piping arrangements have been installed as per approved plan. (Applicable for initial survey)	•••
9.2	Confirmation that approved Technical File is available onboard and SCR is recorded as a component of the engine in the Technical File and EIAPP certificate.	•••
9.3	Confirmation that SCR including chamber, storage tank for SCR and associated piping arrangements have not undergone any modifications since previous survey and found in satisfactory condition. (Not applicable for initial survey)	
9.4	Verification that venting arrangement, heating and/or cooling system for storage tank are in satisfactory condition.	
9.5	Where the storage tank for SCR is installed in a closed compartment, verification that the ventilation system for the compartment is in good working condition and operable from outside the compartment.	
9.6	Verification that the audible and visual alarm of ventilation system for area containing storage tank initiate on failure of ventilation system.	
9.7	Verification that low and high temperature and low and high level monitoring alarms for storage tank containing SCR tested satisfactorily.	
9.8	Verification that personnel protective equipment, eyewash and safety showers are provided as per arrangement plan.	
9.9	Confirmation that if reductant using aqueous ammonia (28% or less concentration of ammonia) or anhydrous ammonia (99.5% or greater concentration of ammonia by weight) is used, it has been approved based on risk analysis. For Scheme A	
9.10.1	Verification as per procedure stated in Technical File that NOx emission measurements of Engine & SCR comply with the applicable NOx emission limit in regulation 13. For Scheme B	
9.11.1	Confirmation that for engine system fitted with SCR an initial confirmation test is performed onboard based on reviewed test protocol and found satisfactory. (Note: Confirmation test is to be undertaken as close as possible to 25%, 50% and 75% of rated power)	
9.11.2	Verification that the engine system fitted with the SCR is as per description given in the Technical File.	
9.11.3	Verification of the operating values at each mode point of the confirmation test as per technical file.	
9.11.4	Confirmation that NOx emission concentrations are measured at the inlet and outlet of the SCR chamber and the calculated NOx reduction rate is not less than the corresponding values as given in the Technical File by more than 5%.	
9.12	Verification of record to confirm that the OEM's recommendations for the exchange criteria for SCR catalyst blocks and recommended exchange time of SCR catalyst blocks have been adhered to. (Not applicable for initial survey)	
9.13	Verification of record to confirm that the ship has assessed catalyst NOx reduction efficiency based on periodical spot checks or monitoring at periodicity specified by the OEM but not more than 12 months. (Not applicable for initial survey)	
9.14	Verification that calibration of measuring instrument, and maintenance of SCR equipment has been done as per OEM's recommendations.	
0.15	Verification that calibration, zero and span checks for the have been carried out at periodicity specified by OEM. (Not applicable for initial survey)	
9.16	Confirmation that any residues generated by the SCR unit are delivered ashore to adequate reception facilities and record maintained.	
10	Additional verification for ships fitted with Exhaust Gas Recirculation (EGR) to reduce N	Ox
10.1	 Confirmation that the following documents are available on board: Manual for EGR bleed-off discharge system; Certificates for type approval of oil content meters (15 ppm alarm); Operating and maintenance manuals of oil content meters (15 ppm alarm); and EGR record book. 	
	Inspection report/certificates for the EGR equipment.	
10.2	Confirmation that approved Technical File is available onboard and EGR is recorded as a component of the engine in the Technical File and EIAPP certificate.	

10.3			the EGR equipment and bleed	-off discharge

12.4			bustion units are as listed in the	ETM	
12.5	Confirmation that	the EGCS has not undergone	any modifications since the pre	vious survey.	

12.6	Scheme A	
12.6.1	Confirmation that the following reviewed documents are available onboard:	
	a. SECP (SOx emission compliance plan)	
	b. SECC (SOx emission compliance certificate)	
	c. Exhaust Gas Cleaning System Technical manual (ETM Scheme A)	
	d. OMM (Onboard Monitoring Manual)	
	e. EGCS Record Book	
12.6.2	Verification of one or all of the identified components, operating values or settings as per	
	ETM-A	
	(Note: Where there is more than one EGC unit within the EGCS abbreviate or reduced the	
	extent of the survey on board can be undertaken if permitted by Administration; however,	
	the entire survey should be completed for at least one of each type of EGC unit on board	
	provided that it is expected that the other EGC units perform in the same manner.)	
12.6.3	EGCS includes means to automatically record when the system is in use and the following	
	parameters against the respective operating limits, or range of operating values.:	
	• washwater pressure and flow rate at the EGCS inlet connection,	
	• exhaust gas pressure before and pressure drop across each EGC unit,	
	• fuel oil combustion unit load,	
	• Exhaust gas temperature before and after the EGC unit	
12.6.4	If a continuous exhaust gas monitoring system is not fitted, confirmation that daily spot	
	check of the following is done and record maintained in EGCS Record Book:	
	• Emission Ratio	
	 washwater pressure and flow rate at the EGC unit's inlet connection, 	
	 exhaust gas pressure before and pressure drop across each EGC unit, 	
	 fuel oil combustion unit load 	
	 Exhaust gas temperature before and after the EGC unit 	
	(Note: The daily spot check is to be done for a duration of not less than five minutes at a	
	minimum recording frequency of 0.1 Hz at normal working condition for each outlet to the	
	atmosphere)	
12.6.5	If a continuous exhaust gas monitoring system is fitted, confirmation that daily spot checks	
12.0.5	of the following parameters is done and record maintained in EGCS Record Book.	•••
	 washwater pressure and flow rate at the EGC unit's inlet connection, 	
	 exhaust gas pressure before and pressure drop across each EGC unit, 	
	 fuel oil combustion unit load 	
	 Exhaust gas temperature before and after the EGC unit 	
	(Note: The daily spot check is to be done for a duration of not less than five minutes at a	
	minimum recording frequency of 0.1 Hz at normal working condition for each outlet to the	
	atmosphere)	
12.7	Scheme B	
12.7	Confirmation that the following reviewed documents are available onboard:	
12./.1	a. SECP (SOx emission compliance plan)	
	b. Exhaust Gas Cleaning System Technical manual (ETM Scheme B)	
	d. OMM (Onboard Monitoring Manual)	
	e. EGCS Record Book	
12.7.2	The Exhaust Gas Monitoring System is approved by Flag Administration /RO	
12.7.2	Confirmation that the Emission Ratio is continuously monitored and recorded against the	
12.7.5	applicable Emission Ratio limit onto a data recording and processing device at a rate which	
	is not less than 0.0035 Hz (i.e. every 4.76 min)	
	(Note: Emission Ratio should be measured at an appropriate position after the EGC unit	
	downstream of the EGC unit, but before any possible mixing of outside ambient air or other	
	additional air or gases with the exhaust gas.)	
12.7.4	Confirmation that daily spot checks of the following parameters is done and record	
	maintained in EGCS Record Book.	
	• washwater pressure and flow rate at the EGC unit's inlet connection,	
	• exhaust gas pressure before and pressure drop across each EGC unit,	
	• fuel oil combustion unit load	
	 Exhaust gas temperature before and after the EGC unit 	
	(Note: The daily spot check is to be done for a duration of not less than five minutes at a	
	minimum recording frequency of 0.1 Hz at normal working condition for each outlet to the	
	atmosphere)	

12.8	Installation Survey Checks	
12.8.1	Verification that the arrangement of EGCS - the scrubber, piping connections,	•••
	bypass, washwater treatment as per the reviewed ETM.	
12.8.2	Verification that EGCS fitted to single main propulsion engines are installed with an exhaust bypass arrangement and operation is satisfactorily.	
12.8.3	For wet type EGCS, confirmation that arrangements are provided to prevent the ingress of scrubber washwater into the fuel oil combustion unit.	
12.8.4	Monitoring, alarm, and shutdown arrangements provided to prevent an abnormal rise of washwater level in the scrubber reaction chamber are tested satisfactorily.	
12.8.5	Confirmation that piping materials used after the SOx scrubber unit are of a corrosion resistant material (such as stainless steel) as per approved plan.	
12.8.6	Confirmation that the isolation and bypass valves are arranged in an interlocked, fail safe	
	manner, such that free flow of exhaust gas to the atmosphere is possible at all times, either through the scrubber unit or through the bypass. Operation verified satisfactorily.	
12.8.7	Confirmation that suitable insulation provided where the surface temperatures are likely to	
	exceed 220°C (428°F) and where any leakage, under pressure or otherwise, of fuel oil,	
	lubricating oil, or other flammable liquid is likely to come into contact with the EGC unit or exhaust pipes.	
12.8.8	Verification that the SO2 and CO2 analysers' model/type, measurement range, probe locations are as per the reviewed ETM.	
12.8.9	Confirmation that the span gases for the SO2 and CO2 analyser are a mixture of SO2 and/or	
	CO2 and nitrogen at a concentration of more than 80% of the full scale of the measuring	
	range used.	
12.8.10	Performed exhaust gas leakage check satisfactorily according to procedures given in OMM.	
12.8.11	For closed loop systems, confirmation that chemical storage tank, EGCS residue/ chemical	
	overflow tank, drip trays, and any other components which may come into contact with the chemical solution or sludge is of a suitable grade of stainless steel or other corrosion-	
	resistant material.	
12.8.12	For dry type EGCS, confirmation that Consumable Handling Equipment and details of the	
	granulate supply and discharge systems are as per reviewed ETM.	
12.8.13	Verification that Filling, Vents, and Overflows for chemical Tank and EGC Residue/	
	chemical Overflow Tank are as per approved plan.	
12.8.14	Verification that for discharge pipework and hull penetration finishes, due care is taken in	
	the preparation of surfaces and the correct selection and application of protective coatings to	
12.8.15	withstand the corrosive effects of low pH discharge water. Verification that the chemical storage and EGCS residue/ chemical overflow tanks is served	
12.0.15	by an effective mechanical exhaust ventilation system as per approved plan.	•••
12.8.16	Verification that the position, model, measurement range of instruments for pH, PAH and turbidity is as per the ETM.	
12.8.17	Confirmation that wash water sampling point / valves are installed at a location that is	
	representative of the main washwater or discharge water stream and accessible to personnel	
	and designed such that the sampling extraction point open in the direction of the water flow.	
12.8.18	Verification that the sensor measurement range corresponds with data logger's measurement	
12 0 10	range.	
12.8.19	Verification that the pH electrode and pH meter have a resolution of 0.1 pH units.	
12.8.20 12.8.21	Confirmation that emission testing carried out in accordance with agreed test protocol Confirmation that the following operational parameters are recorded in accordance with	•••
12.0.21	agreed test protocol:	
	i. Ships Position	
	ii. UTC	
	iii. SO2 after scrubber	
	iv. CO2 before or after scrubber (depending on system, verify as per ETM)	
	 v. Calculated SO2 to CO2 ratio # vi. Washwater pressure at EGCS inlet # 	
	vi. Washwater pressure at EGCS inlet #vii. Washwater Flow rate #	
	viii. Exhaust Pressure before EGCS	
	ix. Exhaust Pressure drop across EGCS #	
	x. Engine / Boiler Load	
	xi. Exhaust Temperature before EGCS #	
	xii. Exhaust Temperature after EGCS #	
	xiii. pH of discharge water #	
	xiv. PAH of inlet water (if applicable)	
	xv. PAH of discharge water (if applicable)	

		-
	xvi. PAH difference reading #	
	xvii. Turbidity of inlet water (if applicable)	
	xviii. Turbidity of discharge water (if applicable)	
	xix. Turbidity difference reading #	
	xx. Temperature of Discharge Water	
	For parameters marked with # above, verified satisfactorily that readings are within the limit	
	as specified in ETM.	
12.8.22	Upon satisfactory installation, sections 2.3 and 2.6 of the Supplement to the ship's	
	International Air Pollution Prevention Certificate are duly completed.	
12.9	Checks during all Installation and Annual/Intermediate/Renewal IAPP Surveys	
12.9.1	Confirmation that data recording and processing device is in satisfactory condition, and data	
	recoded are in UTC format for time and global navigational satellite system is used for	
	position, copy of downloaded reports verified satisfactorily.	
	(Note-Record of data to be retained for not less than 18 month)	
12.9.2	Confirmation that that valid calibration record is available for instruments for pH, PAH and	•••
	turbidity.	
12.9.3	Confirmation from gas analysis certificate that zero and span gases are within date of expiry.	
12.9.4	Confirmation that the sampling line is heated / maintained at a temperature to avoid	
	condensation and the wash out (loss) of SO2 as described in the OMM.	
12.9.5	Confirmation that valid calibration record of SO2 and Co2 analysers is available.	•••
12.9.6	Confirmation that valid calibration record is available or successful calibration is witnessed	
	for:	
	Pressure sensor at EGCS washwater inlet	
	Flow sensor at EGCS washwater inlet	
	Exhaust gas pressure sensor before and after EGCS	
	Exhaust gas temperature sensor before and after EGCS	
12.9.7	Confirmation that EGCS is performing as per the operating values or settings mentioned in	
	the verification procedure.	
12.9.8	Confirmation that extractive sample systems are verified to be free of ingress leakage in	
	accordance with the analysing equipment manufacturers' recommendations at intervals as	
	defined in the OMM.	
12.9.9	Confirmation that EGCS record book is available onboard containing following records:	
	• Maintenance and servicing of the emission monitoring and ancillary components as	
	given in the OMM including like-for-like replacements	
	• Storage and disposal of EGCS residues	
	• Consumption of chemicals (for EGCS consuming chemicals at a known rate as	
	documented in ETM)	
	• Washwater residues delivered ashore to adequate reception facilities (including the	
	date, time and location of such storage and disposal)	
	 Nitrate Discharge Data and analysis certificate 	
	(Note:	
	1. Entries to be maintained on board the ship for a minimum period of 3 years after	
	the last entry has been made.	
	2. Alternatively, this information may be recorded in the ship's planned maintenance	
	record system or Electronic Record Book as approved by the Administration.)	
12.9.10	In case Electronic Record Book (ERB) is provided for EGCS, confirming that ERB is	
//10	approved and "Declaration of MARPOL Electronic Record Book" is available onboard.	
12.9.11	Verification that the condition of the data recording device is satisfactory and that data is	
// •• •	retained for a period of atleast 18 months from the date of recording.	
	(Not applicable for initial survey)	
12.9.12	Confirmation that report generated from the data recording device for a specified time	
	period clearly indicating periods of non-compliance obtained and found satisfactory.	•••
12.9.13	Confirmation that a sample of the discharge water from each EGCS is drawn and analysed	
12.7.13	for nitrate content and report (specific for the vessel) is available onboard.	•••
	(Note:	
	1. Upon installation survey, pending report from the laboratory, a statutory condition	
	is to be provided for a period of 3 months stating "The ship is installed with an	
	EGCS in compliance with MEPC 340(77). Nitrate Analysis of the discharge water	
	is to be undertaken within three months of installation"	
	2. Nitrate analysis is also required within previous 3 months prior to each renewal	
	survey	
	3. Where this regards is to be mentioned in remarks.)	
	5. There and regards to be monitoriou in remarks.)	

12.9.14		
12.7.14	In case the data on discharge water nitrate concentrations gathered from EGCSs of similar	•••
	design are used as an alternative to vessel specific analysis; Flag acceptance of the same is	
10	available	
13	Confirmation that sampling point(s) are fitted or designated as per approved plan for the	
	purpose of taking representative samples of the fuel oil being used on board the ship	
1.4	(applicable wef 1 st April 2022 or earlier as required by flag Administrations).	
14	Confirmation that the designated sampling point required as per preceding checkpoint fulfils	
	the following requirements: (applicable wef 1 st April 2022 or earlier as required by flag	
	Administrations)	
	.1 Easily and safely accessible;	
	.2 Takes into account different fuel oil grades being used for the fuel oil combustion	
	machinery item;	
	.3 Is downstream of the in-use fuel oil service tank;	
	.4 Is as close to the fuel oil combustion machinery as safely feasible taking into account the	
	type of fuel oil, flow-rate, temperature, and pressure behind the selected sampling point;	
	.5 Is located in a position shielded from any heated surface or electrical equipment	
	.6 Is provided with suitable drainage to the drain tank or other safe location.	
0	ulation 15 - Volatile Organic Compounds (Applicable for oil tankers, chemical tankers and g	as carriers
only		
1	Is the tanker (if carrying crude oil) provided with approved VOC Management Plan	
2	Is the ship fitted with Volatile Organic Compound Collection (VOC) System?	
	(If no, this section need not be filled further.)	
3	Drawing / Document regarding design of Volatile Organic Compound Collection System, if	
	fitted, is approved taking into account MSC/Circ 585 "Standards for Vapour Emission	
	Control Systems". (Reg. 15 and MSC/Circ.585)	
4	There is a transfer procedure for the VOC collection system.	
5	Confirmation from general examination that vapour collection piping is in a satisfactory	
	condition.	
6	Confirmation that there is a means provided to eliminate the collection of condensation in the	
	system, such as drains in low points of the line end. (The drains should be checked to ensure	
	they function correctly.)	
7	Confirm that the piping is electrically bonded to the hull and that the bonding is intact.	
8	Confirmation that the isolation valves at the vapour manifolds are operational and that the	
	valve position indicators operate correctly.	
9	Confirmation that the ends of each line are properly identified as vapour collection lines.	
10	Confirmation that the vapour collection flanges are in accordance with the IMO guidelines	
	and industrial standards.	
11	Confirmation that where portable vapour lines are provided that they are in good condition.	
12	Confirmation that the closed gauging system is operational and the readouts in the cargo	
	control area are functional.	
13	Confirmation that there is an everflow control system mervided and that it is constituend	
15	Confirmation that there is an overnow control system provided and that it is operational.	
	Confirmation that there is an overflow control system provided and that it is operational. Confirmation that the safety alarm system. (as shown in the technical manual) both audible

F. Regulation 16 - Shipboard Incineration			
1	Are there procedure to prohibit onboard incineration outside an incinerator or Thermal Waste Treatment Devices (TWTD) except incineration of sewage sludge and sludge oil in boilers and		
	auxiliary power plants which is permitted only when the vessel is not in ports, harbors and estuaries?		
2	Are there procedures / instructions prohibiting incineration of (a) Annex I, II and III cargo residues, (b) PCBs (Polychlorinated biphenyles), (c) garbage containing more than traces of heavy metals and (d) refined petroleum products containing halogen compounds?		
3	Are there procedures / instructions prohibiting incineration of PVCs (polyvinyl chlorides) except in shipboard incinerators type approved in accordance with resolution MEPC.59 (33) / MEPC.76 (40) / MEPC.244 (66) or Thermal Waste Treatment Devices (TWTD) type approved in accordance with MEPC 373(80)?		
4	Is there an incinerator/Thermal Waste Treatment Device (TWTD) installed on board? (If no, this point to be reported not applicable (-) and this section need not be filled further.)		
5	The Shipboard Incinerator, if installed		
5.1	Installed on or after 1 January 2000 that complies with		
5.1.1	Resolution MEPC.76(40) as amended***		
5.1.2	Resolution MEPC.244(66)		
5.2	Installed on or before 1 January 2000 which complies with		
5.2.1	Resolution MEPC.59(33) as amended****		
5.2.2	Resolution MEPC.76(40) as amended***		
5.3	is approved in accordance with national standard not based upon above two standards		
5.4	is not approved in decordance with hadronal standard not based upon above two standards		
6	Plan and arrangement of the above Shipboard Incinerator/TWTD is approved and the		
0	installation is in general conformance with the Drawing / Document.		
7	If fitted after 01. 01. 2000, there is IMO Type Approval Certificate to MEPC.76(40) for		
/	incinerator onboard (for the incinerators with capacities up to 1,500 kW) and MEPC.244(66)	•••	
	(for capacity up to 4000kW).		
8	There is an instruction manual for each incinerator fitted to Resolution MEPC.76(40)/		
0	MEPC.244(66) in order to operate the incinerator within the limits provided in appendix IV to		
	Annex VI (regulation 16(7) of Annex VI);		
	(Note: Incinerators approved to MEPC.59 (33) or with no type approval at all do not require		
	training, as per Reg. 16, although prudent owners may wish to provide and document such training as part of their ISM Procedures, even if only to ensure that prohibited substances are		
0.1	not disposed of as per paragraphs 7.6 to 7.8 above)		
8.1	Records documenting training of crew in operating each incinerator/TWTD is available on		
0	board.		
9	Verification of garbage record book, oil record book and maintenance record.	•••	
10	External examination to ensure that each incinerator is in a generally satisfactory condition and	•••	
	free from leaks of gas or smoke.		
11	Verification that the warning and instruction plates are legible and secured in prominent		
10	positions on or near the incinerator.		
12	Confirmation that the manufacturers name, incinerator model number/type and capacity in heat		
10	units per hour is permanently marked on the incinerator.		
13	Condition of the incinerator casing insulation arrangements.		
As am	ended by resolution MEPC.93 (45) nended by resolution MEPC.92 (45)		
	rators (if installed on or after 1 January 2000)		
14	Confirmation as far as it is practicable by simulated test or equivalent, that the following alarms		
14	and safety devices are in good condition and fully operational.	•••	
14.1	flue gas high temperature alarms and shut downs.		
14.2	combustion temperature controls and shut downs.	•••	
14.3	combustion chamber negative pressure.		
14.4	flame safeguard control, alarms and shutdowns.		
14.5	all alarms both visual and audible are functioning and they indicate the cause of their failure.		
14.6	power loss alarms and auto shut down arrangements.		
14.7	charging arrangements.		
14.8	low fuel oil pressure alarm/shut down.		
14.9	emergency stop switch and electrical isolating arrangements.		
14.10	Interlocks.		
14.11	Confirming the satisfactory installation of drip trays under each burner, pump, and strainer.		
15	Condition of flue gas outlet temperature monitoring system.		

16	If TWTD is installed:	
16.1	If TWTD is installed, confirmation that it has been accepted by the Administration as an	
	equivalent measure	
16.2	If TWTD is installed, Type Approval Certificate is available onboard confirming compliance to	
	resolution MEPC 373 (80)	
16.3	There is an operating manual for each TWTD fitted to Resolution MEPC.373(80) in order to	
	operate the TWTD within the limits provided in to Annex VI (regulation 16(7) of Annex VI)	
16.4	If TWTD is installed, confirmation that an approved TWTD File is available onboard	
16.5	Confirmation that any solid residues or other materials from TWTD, including any washings or	
	other material or from discharge water treatment system collected as part of maintenance or	
16.6	servicing activities, are discharged ashore to appropriate reception facilities.	
16.6	Confirmation that following records are maintained:	•••
	• Events Record covering all phases of operation of the device when in service	
	• Records demonstrating the performance and self-checking functions against respective	
	limits showing that the device performed as required set against the recorded Event	
	Record points	
	• Records demonstrating that the required oxygen content, temperature and pressure	
	 values were achieved set against the recorded Event Record points Records are retained on board at least 18 months from date of recording. 	
16.7	• Records are retained on board at least 18 months from date of recording. Operating procedures available for	
10.7	 preparation and loading of waste, 	•••
	 preparation and roading of waste, shutdown, discharge water arrangement, 	
	 shutdown, discharge water arrangement, removal of residue, storage and disposal ashore 	
16.8	Onboard maintenance in terms of activities and timings are done as per OEM recommendations	
10.0	in order to maintain the effectiveness of the device	•••
	(Note: Maintenance Records are to be retained on board at least 18 months from date of	
	performance.)	
16.9	Confirmation that the measuring equipment for TWTD have valid calibration status	
	gulation 18 - Fuel Oil Quality	
-		
1	Is there a Company procedure in place to obtain fuel oil compliant with Regulation 14 and $P_{\text{Complexion}} = 18 \text{ of } MARPOL 72/78$ energy VI2	
	Regulation 18 of MARPOL 73/78, annex VI? (Note: It is recognized that it may not always be possible to obtain fuel oil compliant with Reg.	
	14 and Reg. 18 since many Governments have not yet ratified MARPOL 73/78, Annex VI.	
	However, it is important to verify that Ship operator has a procedure in place to obtain Annex	
	VI compliant fuel oil and ensures compliance as far as possible)	
2	There are bunker delivery notes on board and fuel oil samples are kept under the ships control	
-	(regulation 18 of Annex VI).	
3	Is there a procedure to retain such notes for at least three years and stored in a manner to be	
	readily available.	
4	Is there a procedure to take fuel oil sample, (at least 400 ml) seal it and retain it on board for a	
	minimum period of 1 year all generally as per Resolution MEPC.96(47) - Guidelines for the	
	Sampling of Fuel Oil for Determination of Compliance with Annex VI of MARPOL 73/78?	
5	Is the above procedure being followed?	
6	Confirmation that Master and ship staff are familiar with bunker delivery procedures in respect	
	of bunker delivery notes and retained samples as required by Reg. 18.	
7	Does the ship have sampling equipment?	
8	Is the Bunker Supplier's sampling equipment used?	
9	Are the sampling bottles generally filled up to 90%?	
10	Does the label on the sealed sample contain following information:	
10.1	Location at which and the method by which the sample was drawn;	
10.2	Date of commencement of delivery;	
10.3	Name of bunker tanker / bunker installation;	
10.4	Name and IMO number of the receiving ship;	
10.5	Signature and names of supplier's representative and the ship's representative;	•••
10.6	Detail of seal identification;	•••
10.7	Bunker grade.	•••
11	Are the samples stored in a safe storage location, not subjected to elevated temperature, away	
	from direct sunlight in a sheltered location, outside the ship's accommodation where personnel	
12	would not be exposed to vapours which may be released from the sample?	
12 13	Is there a system to keep track of the retained samples? Confirmation that documentation in lieu of above-mentioned documentation required with	•••
15	respect to BDN and MARPOL Samples, is available onboard.	•••
<u> </u>	repreters 221, and in first of compres, is a tanuore oncourd.	

14	For ships using Biofuel Blends	
14.1	Confirmation that use of bio-fuel blend as fuel onboard is permitted by Flag Administration and documented.	
14.2	Confirmation that vessel is in possession of required documents issued by the bunker suppliers to show that the bio-fuel blend meets the relevant specification requirements. (e.g. Test analysis report as per ISO 8217:2017, BDN, Safety Data Sheet, Proof of Sustainability (PoS) for Biofuels, etc)	
14.3	Confirmation that the percentage of bio-fuel in the fuel oil blend supplied to the ship is clearly reflected in the bunker delivery note and that the blend proportion conforms to the limit permitted by Flag Administration.	
14.4	Confirmation that measures are in place in respect of shelf life of the bio-fuel blend used onboard as declared by the bunker supplier.	
14.5	Verification of confirmation by manufacturers of engines and equipment (e.g. purifiers) on suitability of use of bio-fuel blend used onboard.	
14.6	Confirmation that crew members onboard are familiarized with the shipboard procedures regarding the handling and use of bio-fuel blend including contingency measures and records for same are maintained.	
H. Sh	ips equipped Shaft/Engine Power Limitation system in order to comply with regulation 25	
1	Verified that the sealing device for EPL/SHAPOLI system continues to remain tamper proof.	
2	Verified that all cases of overriding EPL/SHAPOLI have been notified to Administration/RO and relevant Port State Authority.	
3	Verified that all cases of overriding EPL/SHAPOLI are recorded in OMM and logbook and signed by the master. (Note: The record is to include: .1 ship type; .2 IMO number;	
	 .3 ship size in DWT and/or GT, as applicable; .4 ship's limited shaft / engine power and ship's maximum unlimited shaft / engine power; .5 position of the ship and timestamp when the power reserve was used; .6 reason for using the power reserve; .7 Beaufort number and wave height or ice condition in case of using the power reserve under adverse weather condition; .8 supporting evidence (e.g. expected weather condition) in case of using the power reserve for avoidance action; 	
4	.9 records from the SHaPoLi / EPL system for the electronically controlled engine during the power reserve was used; and .10 position of the ship and time when the power limit was reactivated or replaced.)	
	Verified that the Master and Officers Incharge of Navigational Watch are familiar with overriding ShaPoLi / EPL, restoring back to the EPL value and reporting requirements.	
5	Verified that calibration records for sensors for SHAPOLI are valid and in accordance with sensor manufacturer's recommendation.	
I. Iss	uance/Endorsement of Certificate	
1	Confirmation that the Initial Survey/Annual Survey/Periodical Survey/Intermediate Survey/ Renewal Survey/Change of Flag Survey* completed satisfactorily.	
2	General examination of the vessel carried out satisfactorily towards with the scope of Annual Survey/Periodical Survey /Intermediate Survey/Renewal Survey*. (Note: (i)Authorisation reference received from head office/flag Administration are to be provided under "Remarks". (ii) Further survey scope covered for postponement survey are to be confirmed by indicating under "Remarks".)	
3	On satisfactory completion of the survey/examination* Full-Term Certificate has been issued/endorsed/extended/interim certificate issued/short term certificate issued* (Note: Validity of the short term certificates and other conditions based on which the certificate is issued are to be included in the "Remarks" section.)	
4	Confirmation that the Annual Survey/Periodical Survey/Intermediate Survey/Renewal survey* carried out partly as reported. Extent of survey/examination* carried out/pending* is reflected in the survey status. (Note: Explanation for carrying out surveys partly may be included under "Remarks".)	
5	Annual Survey/Periodical Survey/Intermediate Survey* could not be completed within the survey window, details of reason and actions taken provided under 'Remarks'. (Note: Extent of survey/examination carried out/pending is to be reflected in the survey status.)
